

Powerful, full-function with variable speed G450B & V450B

Vertical head unit (Turret type milling head):

a. Inside Chrome-Moly Gears are hardened and precision ground, connecting with high precision bearings to offer a trouble-free variable speed drive system for spindle, even operated with maximum power.

b. A circulated forced lubrication system provides sufficient lube to all critical areas to prevent overheating of gears and bearings.

c. An electromagnetic spindle brake is used for instant fast-action.

d. An electromagnetic spindle brake is used for making quick and simple tool change by hand.

e. A "Joystick" on the vertical head is used for tapping cycles.

f. Power quill Feed

The heavy-duty quill is chromed, 115mm in diameter with NST 40 Spindle taper, and individually fitted to each quill housing. The power quill feed is electrically controlled for smooth movement and precision machining.
