

HIGH RIGIDITY CONSTRUCTION

The sliding surfaces are coated with precisely scraped TURCITE-B antifriction lining material. It is carefully hand scraped to achieve high accuracy and good retention of lubricating oil essential for a long accurate life.

EXPERT AND PRECISION SCRAPING

- MEEHANITE cast Iron for all major machine parts.
- The major structural parts are scientifically rib reinforced and annealed to relieve stress for outstanding stability of material.
- Box type slideways with long lasting accuracy even under heavy cutting and high-speed machinery operation.
- Extra heavy design on column and base.
- The enhanced ribs in major construction parts provide the super rigidity and precise spindle for high-speed cutting.
- Top open front door design. Operator can get closer to table, which makes setup easier.
