

A DISTINCTION IN PRECISION TECHNOLOGY

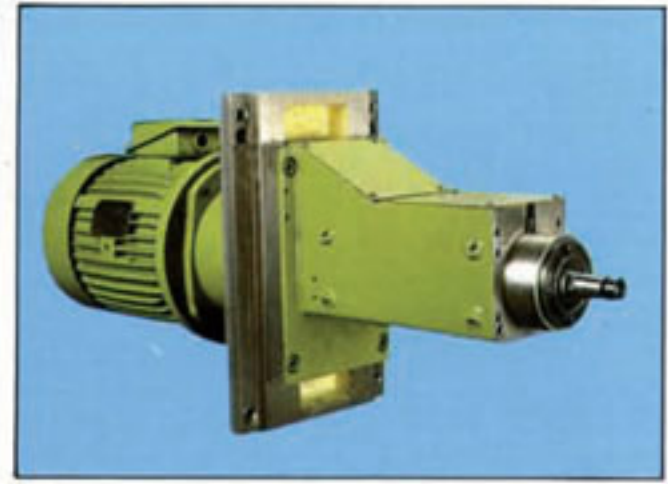

① A pair of proximity switch is recessed at the front of the table by push button. The dog can be easily moved.

② Extra-strong column unit provide excellent damping effect and rigidity.

③ Lubrication oil tank can be taken out easily for cleaning.

④ Rigid spindle with 2 pairs of precision angular contact bearings. Sealed lubrication-precision ground flanges to assure mounting accuracy and rigidity.

Automatic downfeed device

⑤ Saddle clamping device for plunge grinding.

⑥ Precision single nut ball screw assure accurate positioning of cross movement.

⑦ High efficiency variable pump is used for saving energy and lower the temperature rise. Separated from machine body for vibration-free and maintenance reason.

Big on Capacity-Accuracy-Longevity
